DASHBOARD

1. Buat drawer.jsx

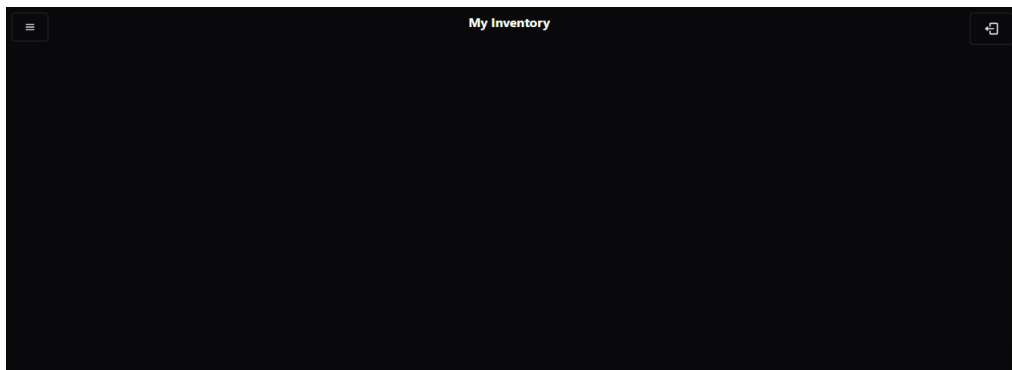

```
1 import { Button, CloseButton, Drawer, Portal } from "@chakra-ui/react"
2 import { useState } from "react"
3 import { BiMenu } from "react-icons/bi"
4
5 const MyDrawer = () => {
6   const [open, setOpen] = useState(false)
7
8   return (
9     <Drawer.Root placement="start" open={open} onOpenChange={(e) => setOpen(e.open)}>
10      <Drawer.Trigger asChild>
11        <Button variant="outline" size="sm">
12          <BiMenu/>
13        </Button>
14      </Drawer.Trigger>
15      <Portal>
16        <Drawer.Backdrop />
17        <Drawer.Positioner>
18          <Drawer.Content>
19            <Drawer.Header>
20              <Drawer.Title>Drawer Title</Drawer.Title>
21            </Drawer.Header>
22            <Drawer.Body>
23              <p>
24                Lorem ipsum dolor sit amet, consectetur adipiscing elit. Sed do
25                eiusmod tempor incididunt ut labore et dolore magna aliqua.
26              </p>
27            </Drawer.Body>
28            <Drawer.Footer>
29              <Button variant="outline">Cancel</Button>
30              <Button>Save</Button>
31            </Drawer.Footer>
32            <Drawer.CloseTrigger asChild>
33              <CloseButton size="sm" />
34            </Drawer.CloseTrigger>
35          </Drawer.Content>
36        </Drawer.Positioner>
37      </Portal>
38    </Drawer.Root>
39  )
40 }
41
42 export default MyDrawer
```

2. Code drawer bisa dilihat pada docs web chakra UI v3

3. Pada dashboard, buat box dengan flex row berfungsi sebagai navbar

```
1 import { Box, Button, Text } from "@chakra-ui/react";
2 import MyDrawer from "../drawer";
3 import { BiLogout } from "react-icons/bi";
4
5 const Dashboard = () => {
6   return (
7     <>
8     <Box width="100dvw" height="100dvh" display='flex' flexDirection="column">
9       <Box display='flex' flexDirection="row" justifyContent="space-between" padding="10px">
10         <MyDrawer/>
11         <Text fontWeight="bold">My Inventory</Text>
12         <Button variant="outline">
13           <BiLogout/>
14         </Button>
15       </Box>
16     </Box>
17   </>
18 );
19 };
20
21 export default Dashboard;
```

4. Buat fungsi handle log out sehingga menghapus localStorage yang ada dan logout.

```
1  const Dashboard = () => {  
2    const navigate = useNavigate();  
3  
4    const handleLogout = ()=>{  
5      localStorage.clear();  
6      navigate("/");  
7    }  
8  
9    return (  
10     <>
```

```
1  <Box display='flex' flexDirection="row" justifyContent="space-between" padding="10px">  
2    <MyDrawer/>  
3    <Text fontWeight="bold">My Inventory</Text>  
4    <Button variant="outline" onClick={()=>{handleLogout();}}>  
5      <BiLogout/>  
6    </Button>  
7  </Box>
```

5. Buat kondisi ketika localStorage kosong maka tidak diperbolehkan masuk ke dashboard.

```
1  const Dashboard = () => {
2    const navigate = useNavigate();
3    const [nama, setNama]=useState();
4
5    const handleLogOut = ()=>{
6      localStorage.clear();
7      navigate("/");
8    }
9
10   useEffect(()=>{
11     const usernameLS = localStorage.getItem("usernameLS");
12
13     if(usernameLS == null){
14       navigate("/");
15     }else{
16       setNama(localStorage.getItem("namaLS"));
17     }
18   })
19 }
```

6. Buat color mode pada dashboard

```
1  import { useColorMode } from "../components/ui/color-mode";
2
3  const Dashboard = () => {
4    const navigate = useNavigate();
5    const [nama, setNama]=useState();
6    const {toggleColorMode} = useColorMode();
7  }
```

```
1 <Box width="100dvw" height="100dvh" display='flex' flexDirection="column">
2   <Box display='flex' flexDirection="row" justifyContent="space-between" padding="10px">
3     <MyDrawer/>
4
5     <Box display="flex" flexDirection="row" alignItems="center" gapX="10px">
6       <Text fontWeight="bold">My Inventory</Text>
7       <Button variant="outline" onClick={toggleColorMode}>
8         <CiSun/>
9       </Button>
10    </Box>
11
12    <Button variant="outline" onClick={()=>{handleLogOut();}}>
13      <BiLogOut/>
14    </Button>
15  </Box>
16 </Box>
```
