DRAWER PARAMETER

1. Secara prinsip best practice React, lebih baik cek localStorage di komponen Dashboard dan oper hasilnya ke Drawer lewat props.
2. Pada Dashboard, buat parameter setter getter untuk nama sehingga bisa oper ke drawer

```
const [nama, setNama] = useState("");
```

```
useEffect(() => {  
  const usernameLS = localStorage.getItem("usernameLS");  
  
  if (usernameLS == null) {  
    navigate("/");  
  } else {  
    setNama(localStorage.getItem("namaLS"));  
  }  
}, []);
```

```
import person from "../../assets/img/person.png";
```

```
<MyDrawer nama={nama} imglogo={person} />
```

3. Tampilkan nama dan foto pada drawer

```
const MyDrawer = ({ nama, imglogo }) => {  
  const [open, setOpen] = useState(false);  
  
  return (  
    <Drawer.Root  
      open={open}  
      onOpenChange={(e) => setOpen(e.open)}  
      size="xs"  
      placement="start"  
    >  
      <Drawer.Trigger asChild>  
        <Button variant="outline" size="sm" shadow="1px 1px 1px grey">  
          <BiMenu />  
        </Button>  
      </Drawer.Trigger>  
      <Portal>  
        <Drawer.Backdrop />  
        <Drawer.Positioner>  
          <Drawer.Content>  
            <Drawer.Header>  
              <Drawer.Title>{nama}</Drawer.Title>  
            </Drawer.Header>  
            <Drawer.Body>  
              <Center>  
                <Image src={imglogo} width="20dvw" />  
              </Center>  
  
              <Box  
                paddingTop="20px"  
                display="flex"  
                flexDirection="column"  
                gap="10px"  
              >
```

Admin Coba

Coba lakukan import foto dari dashboard oper ke drawer
